

# DESCRIPTION OF ALTERNATIVES

- Alternative One: The No Build Alternative. Maintain the existing condition. No improvement to safety or traffic operations.
- Alternative Two: Provide two-way left turn lanes along the centerline of University Avenue between raised median channelization at major intersections.
- Alternative Three: Construct continuous raised medians between intersections. Right-in right-out access would be maintained at all existing driveways.
- Alternative Four: Construct continuous raised medians between intersections. Direct driveway access to University Avenue would be eliminated where reasonable alternative access can be provided. Any remaining driveway approaches would be consolidated to the maximum practical extent. This alternative would include the northerly extension of Halvorson Road to Wolf Run and relocation of Indiana Avenue approximately 160 feet to the south.
